

-For Immediate Release-

**New Low Cost, Low Capacity Tension & Compression Load Cell**

The Duramount 21 universal low capacity load cell weighing assembly is ideal for cost sensitive force measurement applications. Using one of our ESP series load cells we can achieve an accuracy of 0.025% of full scale in either tension or compression. *That's twice as accurate as most other tension & compression load cells in this capacity range.* The Duramount 21 capacity ranges from 0.3 – 50 kgs. The load cell is built with a short cable for OEM applications or it can be easily optioned with a connector and mate with 5', 10', 25', and 50' of cable. The end-user can add unlimited mounting configurations in the field by removing the arms to drill and tap additional holes without damaging the load cell.
